Wiggle Room
Compost Tea Brewer

About:
Our compost tea brewers use a small amount of worm castings to create gallons of compost tea. They do this by suspending the castings in water and pumping in air to oxygenate the mixture and release the microorganisms. Special additives are added to promote micro-organic growth and after 24 hours the beneficial microorganisms have multiplied exponentially.

Design Features:
- All brewers are cone shaped so that all areas are oxygenated. This ensures that no spaces are able to go anaerobic, avoiding the growth of harmful organisms
- The air hose is secured above the maximum water level so liquid is unable to flow into and damage the pump
- The outlet has a dual-valve system, which can be used to streamline dispensing and prevent backflow when the air pump is turned off
- The elevated position of the tank allows the tea to be gravitationally dispensed
- Interchangeable outlets allow sprayers to be filled directly or for hose connection for filling larger tanks
- The simple design allows for easy, efficient cleaning of all parts to remove unwanted anaerobic bio-film

Available Sizes and Prices:
- 7-Gallon Brewer --- $750
- 30-Gallon Brewer -- $950
- 50-Gallon Brewer -- $1200
- 110-Gallon Brewer – $1500
